

KPC REVENUE ASSURANCE

A national telemetry-to-ledger platform that turns 1,700km of pipeline dwell time into audited, SAP-posted revenue – deterministically.

KOSF MOMBASA → NAIROBI → WESTERN KENYA

1,700 KM

PIPELINE CORRIDOR

5 national terminals

500+

TANKERS / DAY

Loading across all gantries

4.2 DAYS

SETTLEMENT SLA

vs 45-60 day legacy cycle

KES 18.7M+

PROTECTED / MONTH

Live SCADA-verified total

Figures are illustrative, drawn from the platform's seeded demo dataset – not audited financials.

Problem Overview

Where KPC's revenue quietly leaks today

Unbilled Demurrage Leakage

~KES 45M/yr*

Paper gate passes and fragmented spreadsheets mean tens of millions of KES in legitimate demurrage are never billed.

Crippling 45-60 Day Dispute Cycles

45-60 DAYS

OMCs dispute manual timesheets with no audit trail, dragging invoice settlement out for weeks.

Metrological Data Silos

5 SCALES

Tare and gross weighbridge scales sit disconnected from the billing engine across 5 terminals.

Zero Real-Time SAP Sync

MANUAL ERP

Manual batch journal entries leave no deterministic evidence chain for statutory review.

REAL KPC LOADING YARD – MOMBASA CORRIDOR

ALIGNED WITH UN SDG

SDG 8

SDG 9

SDG 12

*Estimated leakage range, modeled from legacy manual-process patterns – to be validated against KPC audit data.

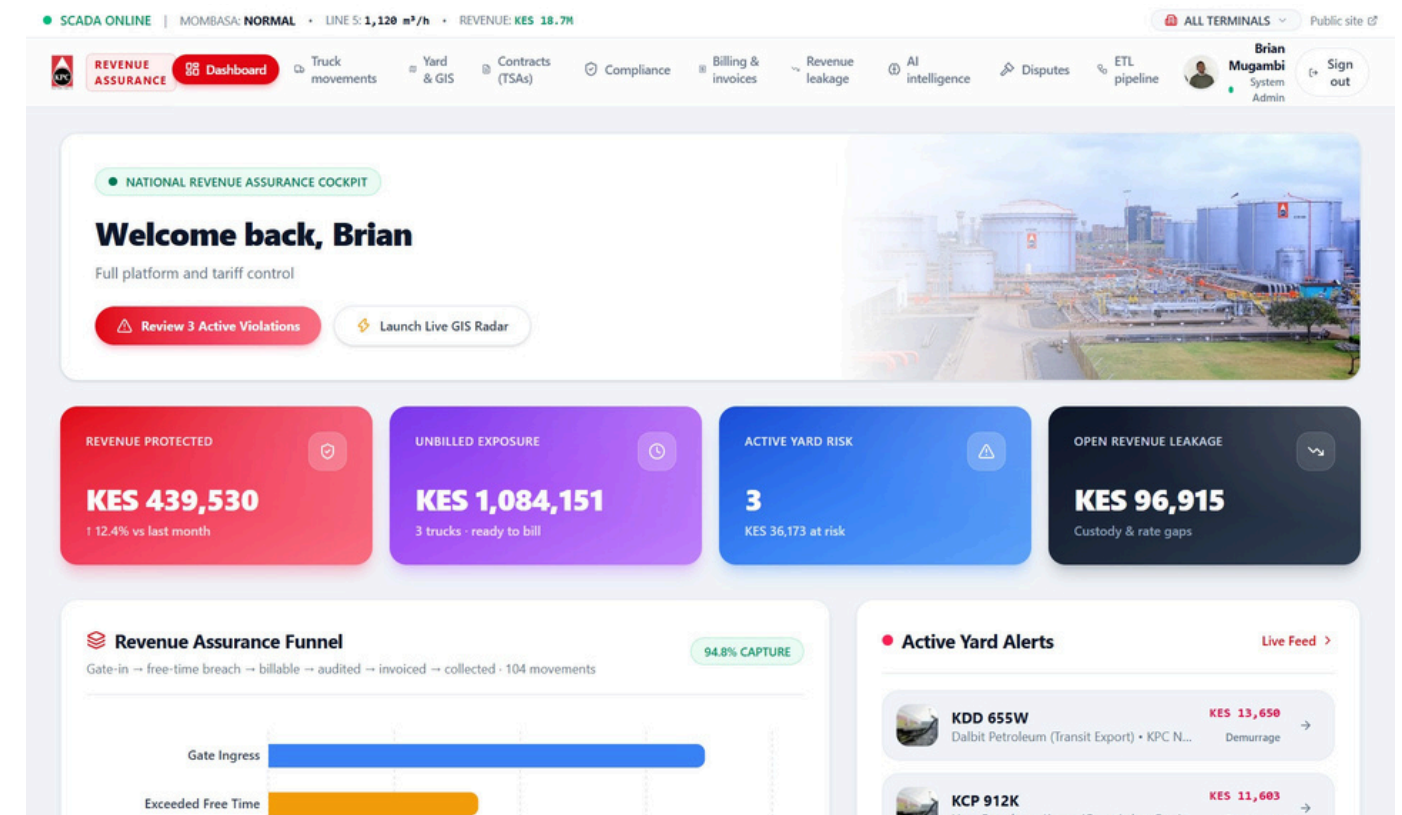

Telemetry to Ledger, Automatically

KPC Revenue Assurance is a national telemetry-to-ledger platform that connects yard operations, weighbridge telemetry, customer contracts and SAP into a single deterministic pipeline — so every hour of dwell time becomes an audited invoice, automatically.

- Captures truck, driver and yard telemetry in real time across all 5 national terminals
- Applies each customer's contracted free-time and rate rules automatically — no manual lookups
- Runs every charge through a validation engine with duplicate-checks and human review for exceptions
- Posts invoice-ready charges straight into SAP/ERP, closing the audit trail end to end
- Surfaces revenue and performance monitoring on a live executive dashboard

From Contract to Insight: How Revenue Gets Assured

Retrieve Customer Contract

Apply Free-Time & Rate Rules

Calculate Demurrage / Detention

Validation Engine

VALIDATION ENGINE SPLITS EVERY CHARGE:

VALID → Auto Duplicate-Check

EXCEPTION → Human Review & Approve

5 Invoice-Ready Charge

6 ERP / SAP Posting

7 Executive Monitoring & Revenue Insight

What Makes Us Unbeatable

Beyond capture rate, the platform is built to outlast any spreadsheet-era fix:

Audit-Ready Compliance

Tamper-evident trail for EPRA & KRA statutory review — every charge traceable from telemetry to ledger.

Faster OMC Relations

Transparent, dispute-resistant billing replaces paper timesheets and weeks of back-and-forth.

Full Operational Visibility

Live SCADA and yard telemetry give KPC a real-time view no manual log ever could.

Scalable Across Terminals

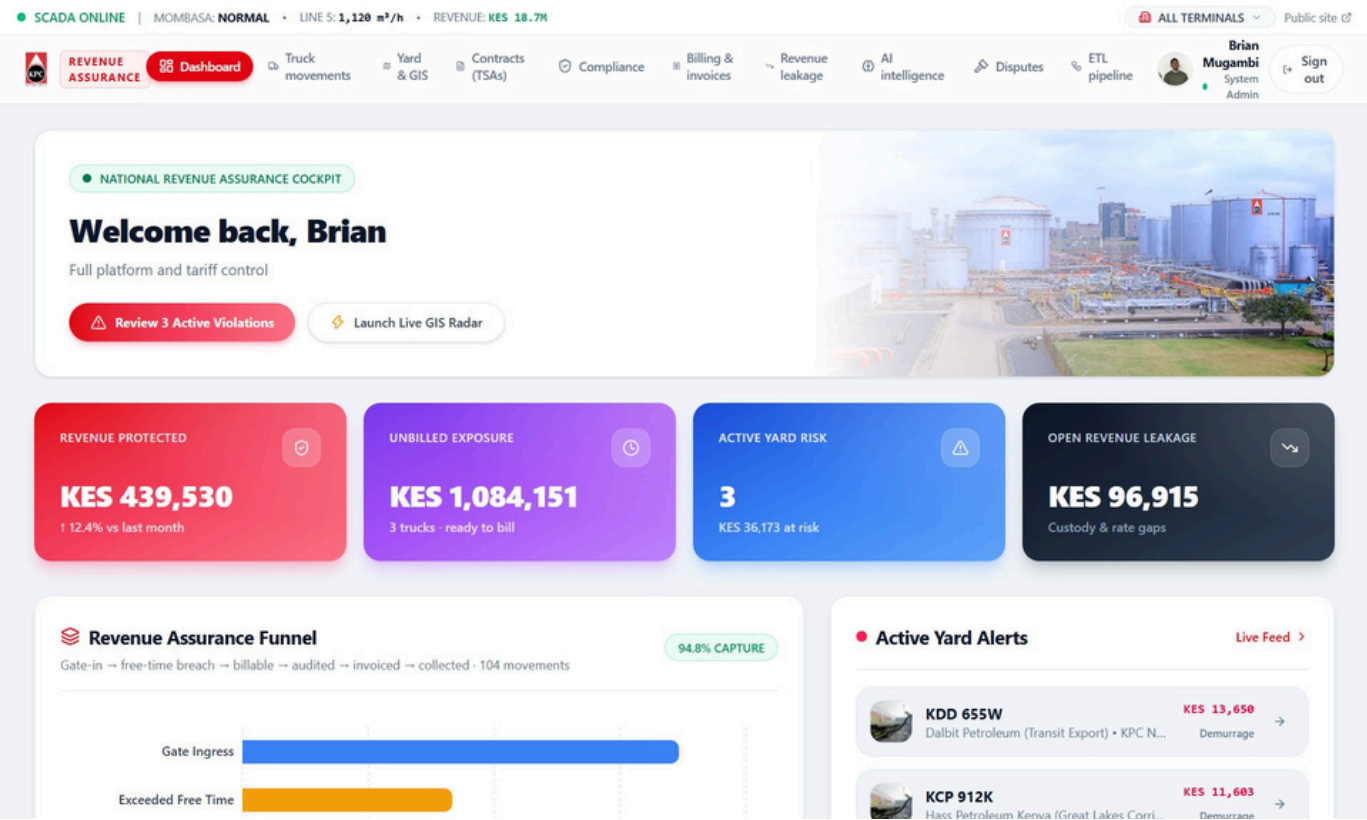

One engine already runs all 5 depots — extending to new terminals is configuration, not rebuild.

BUSINESS MODEL

How Revenue Gets Assured – and Protected

The platform's value is the demurrage revenue it recovers versus the legacy manual process – captured through SCADA-verified telemetry, contract-aware rate rules, and a deterministic validation engine that turns dwell time directly into SAP-posted invoices.

Revenue captured	KES 18.7M+ protected per month, live and SCADA-verified
Accuracy	99.98% arithmetic accuracy across every calculated charge
Speed	4.2-day settlement SLA vs a 45–60 day legacy dispute cycle
Immediate opportunity	KES 224M in recoverable annual demurrage (SOM)

REVENUE ASSURANCE FUNNEL – DEMO DATA, 94.8% CAPTURE

Beyond the revenue numbers, the engine also delivers audit-ready compliance, faster OMC relations, full operational visibility and scalability across every terminal.

THANK YOU

Questions & Discussion

Kenya Pipeline Company has the infrastructure to lead Africa in energy distribution. We invite the board to approve the immediate nationwide rollout of the KPC Revenue Assurance Platform across all five terminals
